

We help recruiters place more, faster

Redline Growth is an onshore GTM Engineering services firm.

We build customized intelligence engines that surface the companies about to run a search and the candidates about to move, scored on fit and timing, ready to act.

Solutions orchestrate and integrate a wide array of automation and AI tooling to deliver the right insights to both desks within the systems and workflows they already use.

We deliver the intelligence, your producers win the search and place the candidate.

SIGNAL DETECTION · ENRICHMENT · TIMELY CONTEXT · OUTREACH

5x

More likely to win the search
by reaching the buyer first

Forrester

30%

Of producer time lost to
sourcing, not placing

Industry benchmarks

2x

Win rate, signal-triggered vs
cold outreach

Champify 2025

VALUE AT EACH PHASE, COMPOUNDED AS A COMPLETE ENGINE

01 · DETECT

Signals that an account is about to hire.

A custom signal taxonomy watches both sides of your market for the companies about to run a search and the candidates about to move, before the rest see them.

02 · TRANSLATE

Signals turned into a brief your desks can act on.

Each signal is scored on fit and timing, then assembled into the context a producer needs: who, why now, and the warm path in.

03 · ACTIVATE

Delivered into the tools your desks already use.

The intelligence lands with the right desk inside your ATS and CRM. No new platform or tool to learn.

BUILT FOR THE RELATIONSHIP-BASED, LEADER-LED DESK ENVIRONMENT

Every firm can buy the same boards and lists. Few can turn them into the timing and fit that wins the search and makes the placement before the market floods it.

LEAVES A GAP

Job boards and list tools

They sell you postings and contacts. You still do the sourcing, the scoring, and the timing. Every competitor works the same boards.

LEAVES A GAP

Offshore sourcing and RPO

It adds volume on contract, not a system. Off-brand for a relationship-led desk, and nothing durable is left behind.

MEETS THE CHALLENGE

Redline Growth

An onshore service pairing GTM engineering with recruiting operating experience. We build the two-desk signal system and run it for you, so producer hours land where searches are won and placements made.

TWO WAYS TO WORK TOGETHER

PROJECT BASED

A fixed-scope intelligence asset

A defined deliverable: a scored account target map, a talent map, or an assessment. Yours to use inside your ATS and CRM. Scoped and priced per engagement.

Tier 1: 2 to 4 weeks · Tier 2: 4 to 10 weeks

From \$5,000 PER ENGAGEMENT

SUBSCRIPTION BASED

The live engine for both desks

The Detect, Translate, Activate cycle run continuously on both desks for contingency and container search, tuned by a dedicated GTM engineer, delivering scored searches and candidates on a regular cadence.

Pilot: 4 to 6 weeks to stand up · subscription extends only on proof of value

From \$4,000 PER MONTH

Indicative. Subscription pricing is banded to producer count and annual fee revenue. Contingency and container run on the same engine.

Grow Pipeline, Not Headcount
